

FLEXIBITS

FlexiBits are made out of a combination of canonical shapes such as **slices** and **bases**.

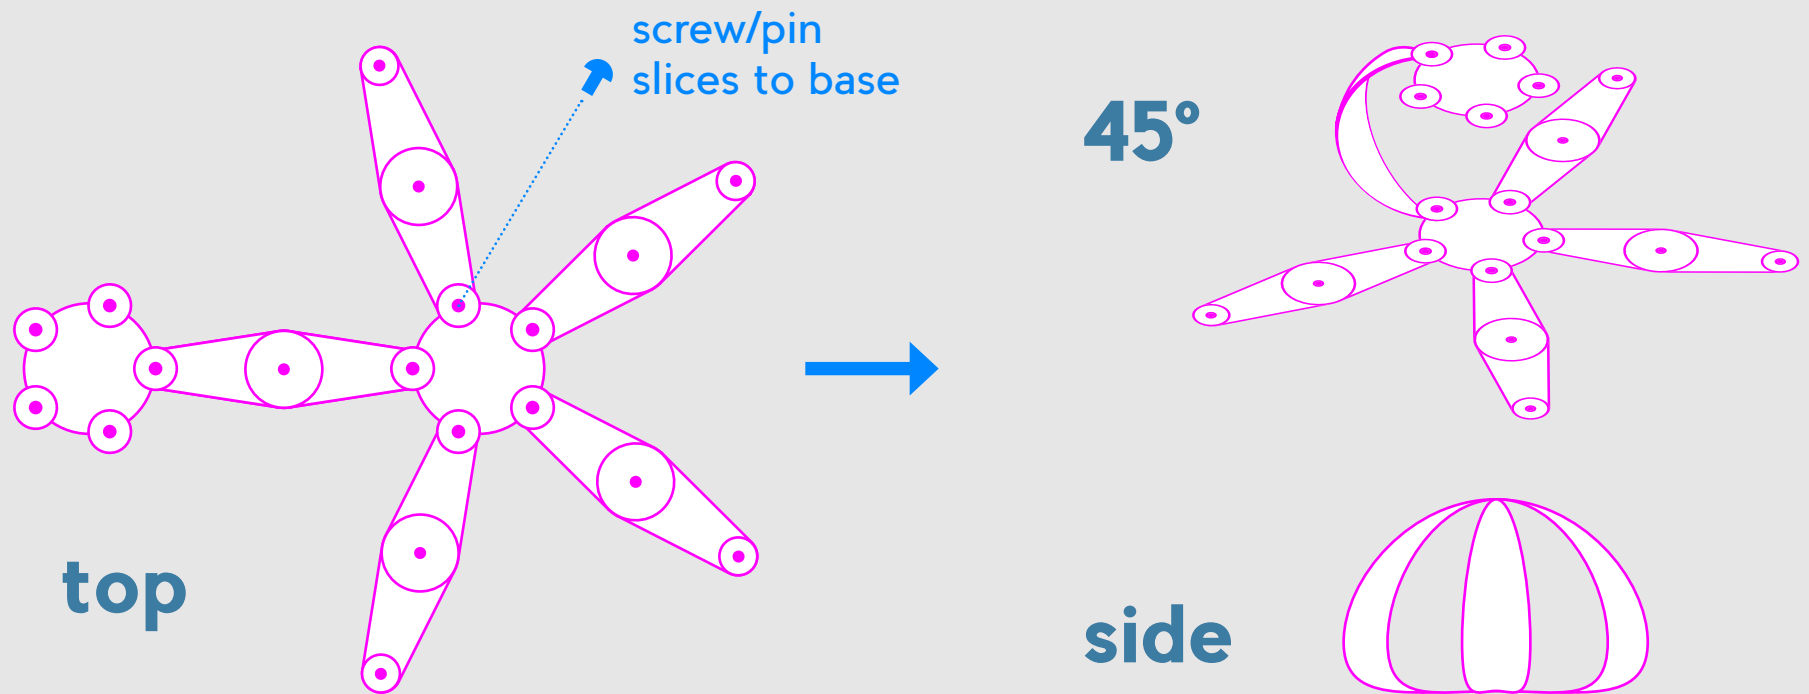

slices

bases

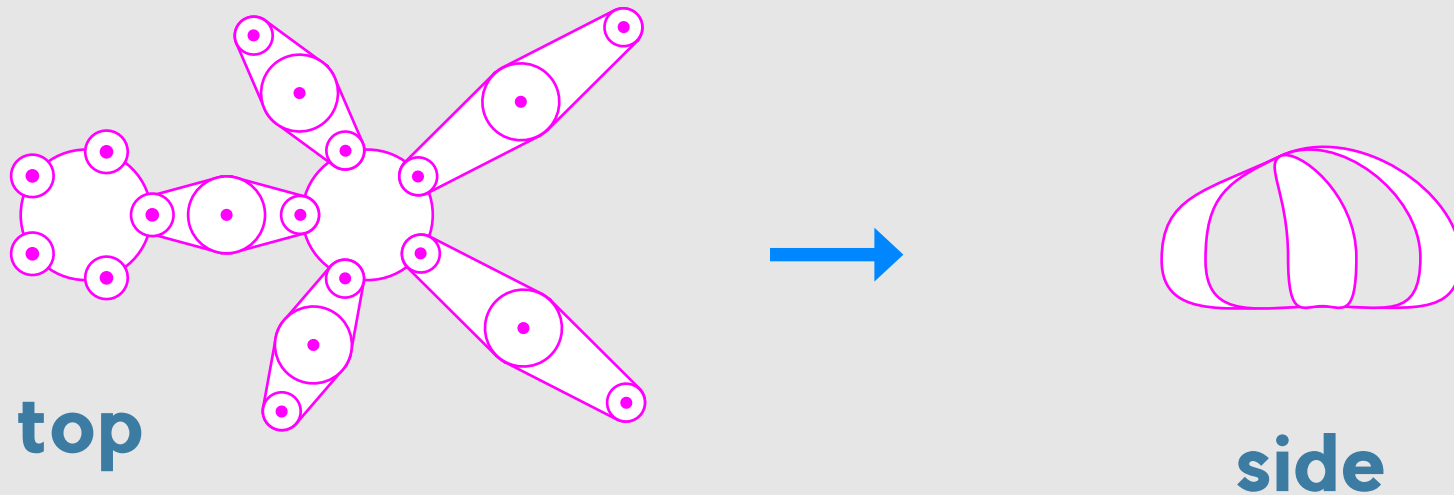

FLEXIBITS

The slices and bases attach to assemble like an orange peel.

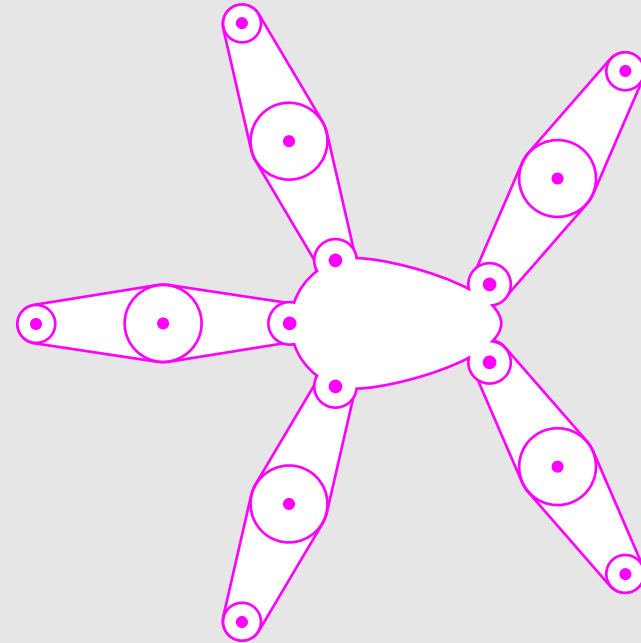

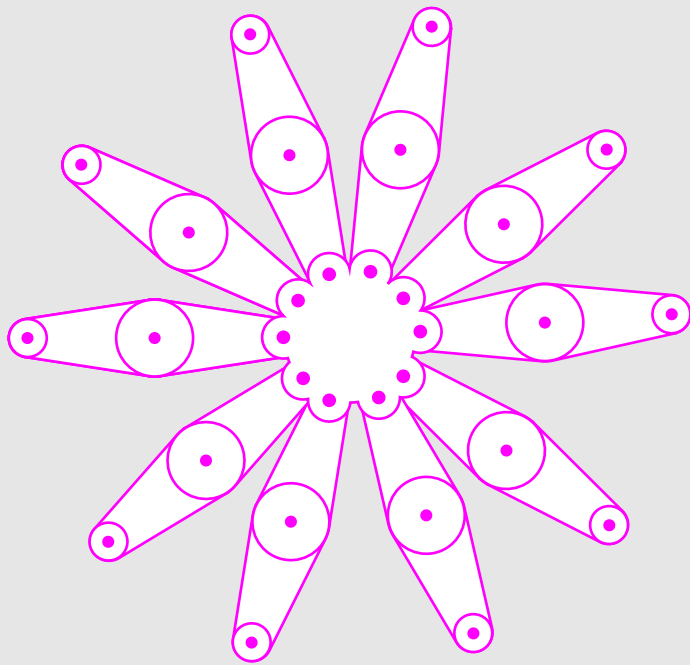

FLEXIBITS

Slices don't have to be the same length. Making some shorter will give the FlexiBit an angled profile.

FLEXIBITS

Bases can be any shape and include as many slices as you want.

FLEXIBITS

Format your print page so that you can easily cut out your slices.
